This multidisciplinary project aims:

to develop a **person-centred** methodology for participatory design in the fields of eTextiles, Interaction Design and Service Design for the Internet of Things

to include **mental health** service users and providers in the developing public imaginary of these technologies.
Facilitating a 'Non-Judgmental' Skills-Based Co-Designed Environment

We've done a series of workshops at Mende. My background in textiles, we'd talk about our issues but make things. The guitar strap.

Health Centered. Group not much different but more relaxed.

We had very ambitious people.
